

Hemsation Fields

Scope: New Hemp Refining Facility

Location: Reedsburg, Wisconsin

Designer: Integrity Engineering & Design

The Hemsation Fields facility is an energy-efficient, 8,400-square-foot pre-engineered metal building, with a 1,400-square-foot office area and 7,000 square feet of hemp production space. The project also includes a large seed dryer for drying hemp seed. The production area can be used both for growing product and for future production equipment.

This design-build project was a relatively straight forward construction project, however, there were challenges early on in the project with the Reedsburg Industrial Park site that was chosen for development. The site required extensive soil remediation due to site and civil challenges. The project took four months to construct and was completed in time for production in the Fall of 2019, but due to early onset of cold weather, the final asphalt parking lot and landscaping weren't completed until the Spring of 2020.
